

Hi Dr. Berke,

I just wanted to send you an email to let you know I absolutely love the corneal reshaping (orthokeratology).

As a radiologist my vision is critical to my professional career. Previously I wore disposable contacts but that would cause eye dryness and irritation during the days, especially if I had to work late at night. I didn't want to get laser surgery done because of the potential halo artifact in dim environments (which where I work every day). Ortho-K has been the perfect fit, and now after 5 years, I couldn't be happier or imagine going back to regular disposable contacts. Many of my colleagues have gotten progressively myopic over these past years probably because of the intense strain we put on our eyes. I just had my vision checked yesterday and I still have perfect 20/15 vision.

Again thanks for taking care of my vision and offering this wonderful option.

Eric Chen, MD
